

Power output for built-in water meter

2 Gates to detect speed of sensor.  
Should really be connected to interrupts  
so that we can use pinmode overwired to  
mouse-sleep coordinates...  
Otherwise 2 Analog inputs for sensor and 1  
digital output for powering the LEDs

Light Lcd on 0

Sensor 1 on no light

Sensor 1 on no light

Microphone PREAMP

Chordophone microphone supply 5V+40
